

Vestas

With more than 130 years of brush production, and 25 years in wind industry, Carbex has outstanding experience in making wind work.

Together with Vestas, Carbex silverbrushes are installed in over 70 GW (+60 000 Turbines) of wind power capacity. This unmatched track record is the backbone of Carbex expertise and powering continuous product improvement and performance optimization.

Carbex silver carbon brushes - gives you a peace of mind.

Carbex silverbrushes are originally factory fitted in all Vestas on-shore turbines, installed in +70 countries around the world, operating on every kind of site, from high altitude to extreme weather conditions. This means that we have produced millions of silverbrushes for Vestas wind turbines.

Our silverbrushes are perfect for wind power since they have a longer lifetime (up to 5 years for some types) which means:

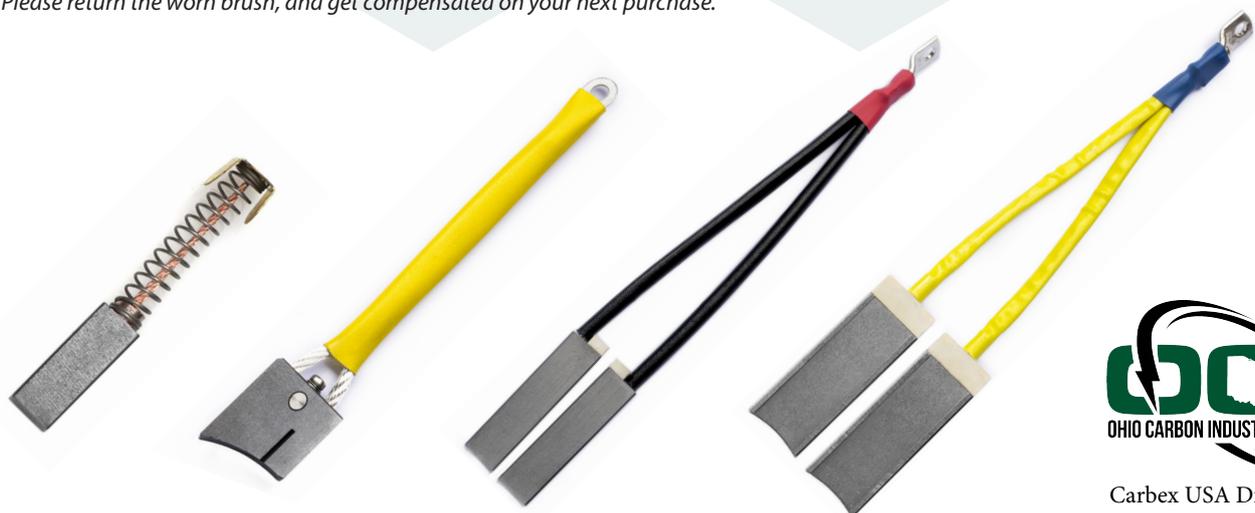

- ✓ *Less maintenance*
- ✓ *Creates less dust (half of a copper brush)*
- ✓ *Outstanding current transfer, less chance of short circuits*
- ✓ *No need for any retrofit components*
- ✓ *Refund system.**

All this gives a lower lifetime cost and a much more reliable system.

CARBEX KNOWS WIND POWER!

Contact OCI when multibrand brushes for “all” turbine types are needed!

** Please return the worn brush, and get compensated on your next purchase.*
